

TABLES AND FIGURES

Figure 1: Summary of the treatments

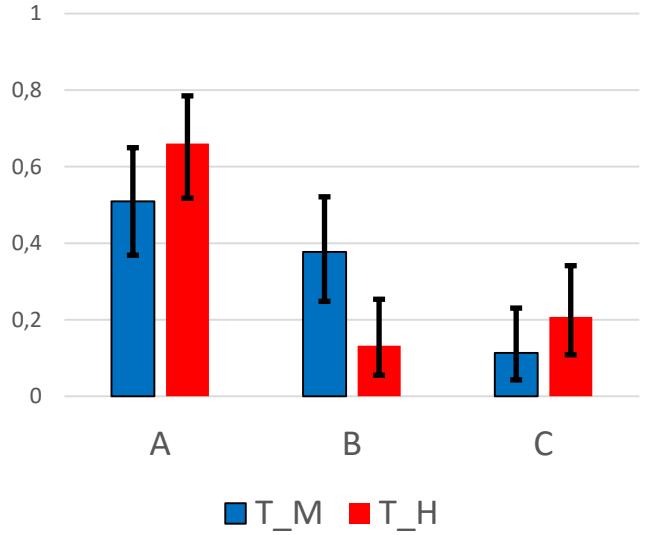

Figure 2: Descriptive statistics of participants' decisions

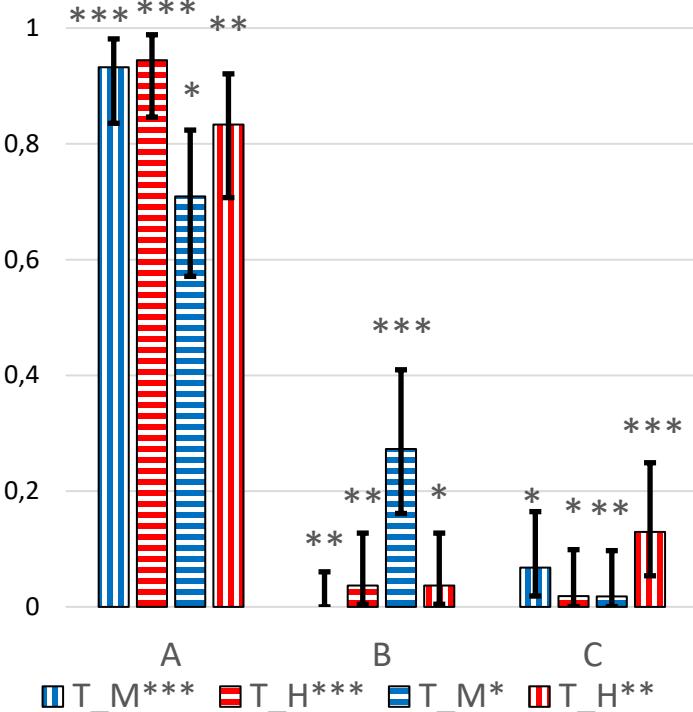

a) Opening: No-social influence treatments

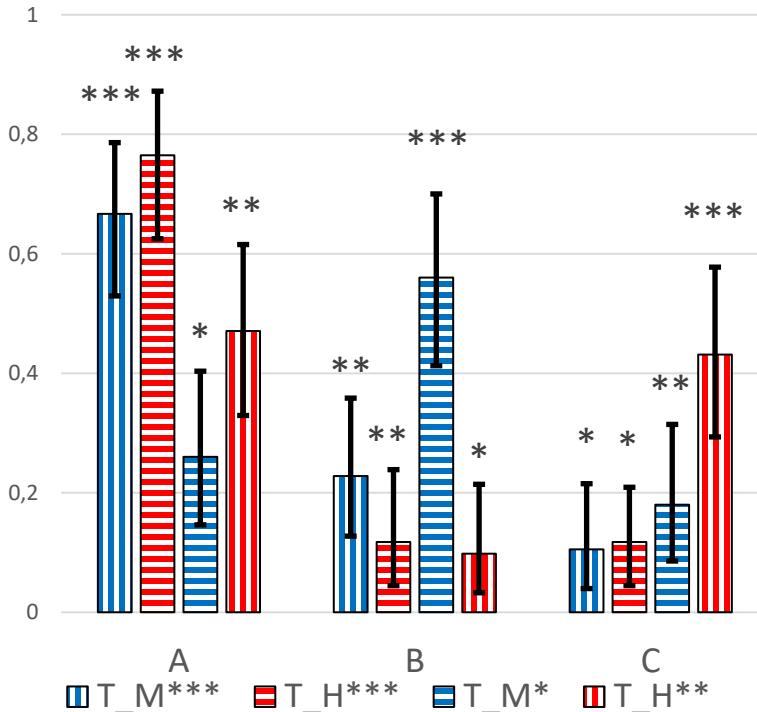

b) Choice: No-Social influence treatments

c) Opening: Social influence treatments

d) Choice: Social influence treatments

Note: Frequency of opening first alternatives A, B or C in the No-social influence treatments and the Social influence treatments (figures a and c, respectively). Frequency of choosing first alternatives A, B or C in the No-social influence treatments and the Social influence treatments (figures b and d, respectively). In the Social influence treatments, the value depicted on top of each bar indicates the number of stars of the alternative. The interval depicted in each bar represent confident intervals at a 95% level. The number of subjects in each treatment is: T_M=60, T_H=58, T_M***=59, T_H***=54, T_M*=55, T_H**=54.

Table 1: Social influence effects (Hypothesis 1)

Alternative (1)	Opening (2)	Choice (3)	Alternative (4)	Opening (5)	Choice (6)	Diff Open (7)=(2)-(5)	Diff Choice (8)=(3)-(6)
(H,A,★★★)	.94	.76	(H,A,★★)	.83	.47	.11***	.29***
